

Innovations in Energy Efficiency for Homeowners

Panel Discussion

October 13, 2009 ~ 6 to 8 p.m.

Kirkland City Hall – 123 5th Ave Kirkland, WA 98033

As part of Sustainable September 2009, the City of Kirkland is sponsoring an evening panel discussion - "Innovations in Energy" – in which industry professionals will share their insights on remodeling homes to become more energy efficient. Somewhere between 80-90 percent of the current housing stock needs energy efficiency upgrades; and if done would significantly reduce the amount of energy needed to operate our homes and simultaneously reduce green house gas emissions. Come and learn about the latest tax credits and deductions, strategies to reduce energy consumption in your home, how to upgrade your home when remodeling or retrofitting. A question and answer period will follow the panelist's presentations.

Panel

Joel Smith - Energy Audit specialist – Puget Sound Energy

Lesa McIntyre – Building Design Firm – Greenworks

Jason Lear – Home design, builder – Batt & Lear
