INTEGRUS PROJECT NO. 21401.00
OWNER PROJECT NO. 8360

DESCRIPTION:

The Juanita High School project includes phased demolition of the existing academic building and phased construction of a new three-story building in its place. The new building will be approximately 132,000 square feet designed as Type 1B construction over a steel frame structure. The program includes classrooms, school administration, commons, kitchen and servery, library, auditorium, and gymnasium and building services support. Mechanical units located on the roof will be located in multiple small penthouse structures. The existing field house and pool will remain as-is. Site work includes new walkways and landscaping at the building courtyard and the promenade leading to the existing fields, reconfiguring the existing northwest and east parking lots, and re-surfacing the existing tennis courts. Temporary campus facilities will include occupancy of the existing academic building in addition to portable buildings located on-site during construction for Phase 1. During Phase 2, students and staff will continue to occupy the completed buildings in addition to the first phase of new construction.
