

Addendum # 1

City of Kirkland Landscaped Median Retrofit Project Consultant (Job# 45-21-PW) Answers to Questions

- 1) We are providing potential teaming partners that we may need as consultants on this project as subconsultants in our team and we wanted to see if the City will be providing land surveying services or if we need to include them as part of our project team?**

The City does not have land surveying capabilities and as such would need you to provide that.

- 2) We are hoping to see if you can provide a bit of clarification for the “availability and schedule” selection criteria. Is a proposed project development schedule desired from the consultant team to respond to the City’s “availability and schedule” RFQ criteria? Or are you looking more for project teams' available time and our schedule of availability to work on this project?**

Because we are hoping to move this project forward and anticipate any construction award this Spring in order to take advantage of lower bids, a team that would not be ready until fall would likely not be rated as well in this criteria.
