CERTIFICATE CONCERNING DESIGN AND CONSTRUCTION OF ELECTRONIC SPEED MEASURING DEVICES

I, Nathan Dumler, do certify under penalty of the laws of the State of Washington that the following is true and correct:

I have been employed as a technician by American Traffic Solutions for 3 years. I became a speed validation technician in 2018 and have over 1000 hours performing speed validation tests. I am nationally certified as a RADAR and LIDAR operator. The City of Kirkland currently uses the AutoPatrol™ 3D radar fixed speed safety camera system, an electronic speed measuring device provided through a contract with American Traffic Solutions, Inc. ("ATS"). Part of my duties include monitoring regular testing of the AutoPatrol 3D radar fixed speed safety camera systems used by the City of Kirkland.

ATS contracted with the City of Kirkland to provide an Automated Speed Enforcement ("ASE") system designed to record the speed of a vehicle and obtain photographs or other recorded images of the vehicle and the vehicle's registration plate while the vehicle is traveling in excess of speed limits in certain safety zones within posted limits.

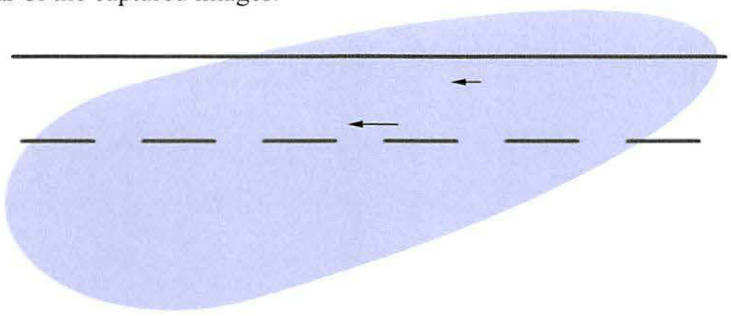
The ASE program includes the use of the AutoPatrol 3D radar fixed speed safety camera systems at the following locations within the City of Kirkland:

Location Code	Location Description	Lanes Monitored
KRKF001	NB 132ND AVE NE @ MUIR ELEMENTARY/KAMIAKIN MIDDLE	1
KRKF002	SB 132ND AVE NE @ MUIR ELEMENTARY/KAMIAKIN MIDDLE	1
KRKF003	EB 80TH ST @ ROSE HILL ELEMENTARY	1
KRKF004	WB 80TH ST @ ROSE HILL ELEMENTARY	1
KRKF005	SB 724 STATE ST @ LAKEVIEW ELEMENTARY SCHOOL	1
KRKF006	WB 10600 NE 68TH ST @ LAKEVIEW ELEMENTARY SCHOOL	1
KRKF007	NB 12637 84TH AVE NE @ SANDBURG ES / FINN HILL MS / THOREAU ES	1
KRKF008	SB 14006 84TH AVE NE @ SANDBURG ES / FINN HILL MS / THOREAU ES	1

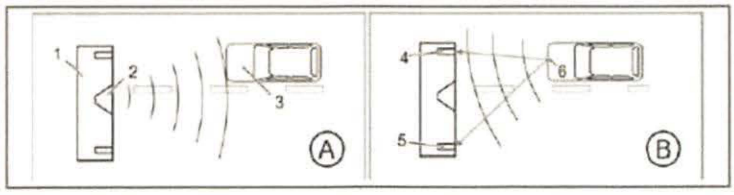
The AutoPatrol 3D radar fixed speed safety camera system operates by measuring vehicle speed, as well as position relative to the radar to calculate and differentiate multiple vehicles in the radar beam. The speed of a moving vehicle is measured by Doppler radar. Doppler radar is a generally accepted technology used for measuring speed. The AutoPatrol 3D radar technology is used throughout the US and Europe as well as other countries and is approved by the Swiss national metrology institute- METAS.

The AutoPatrol 3D radar fixed speed safety camera system uses a tracking radar sensor for measuring vehicle speeds and detecting speed violations. The AutoPatrol 3D radar is aligned at a fixed angle across the road. The AutoPatrol 3D radar emits a horizontal beam over the road surface as represented by the illustration below. The tracking radar can simultaneously detect multiple vehicles and measure their speed, distance, angle and movement within the radar beam. The radar tracks multiple vehicles by reconstructing vehicle movement from

the measured object speed, angle and distance values. If a vehicle passes a defined trigger line, the radar outputs the vehicle's speed and lane information. The camera connected to the tracking radar uses this information to determine if there is a speed violation and to capture photographs showing the measured speed and lane on the databar of the captured images.



The tracking radar utilizes the Doppler Effect for speed determination. If an electromagnetic wave is emitted at a moving object, then the wave is reflected back from the moving object. The frequency of the wave received back by the radar shifts based on the speed of the moving object and its direction of travel. The tracking radar continuously determines this frequency shift of each object to calculate the object's speed. The tracking radar consists of two receiving antennas integrated into a single radar sensor. This configuration allows the radar to measure the distance and angle of the vehicle relative to the position of the radar sensor. Illustration A and B show the measurement principle in simplified form. The radar sensor emits a radar beam (illustration A). The radar beam is reflected by the vehicle (illustration B). The two receivers receive the reflected radar beam. The radar sensor evaluates the return frequency, as well as the phase difference of the reflected radar beam from both of the receivers. With the aid of these values the radar sensor calculates the vehicle position.



1 Radar sensor
2 Transmitter
3 Detected vehicle
4 Receiver A
5 Receiver B
6 Reflected signal

Prior to operation each day, the system performs a system self-test. This self-test performs an electronic tuning fork test to produce a specific frequency and returns an associated speed value. Only if the return value meets the acceptance criteria to show that the system is operating correctly will the system enter measure mode. Unless a self-test is successful, the system will not enter measure mode and no violations will be captured. Additional information stored as metadata within each image includes coordinates of the vehicle position at the time of capture. This information is extracted and utilized through a secondary speed verification process to provide yet another means to validate offender speed and position based on the two images obtained and image analytics. In addition to the internal system checks and the manufacturer calibration certification, the 3D radar system is subject to routine and independent calibration check of the speeds produced by the system at least annually by a qualified technician.

Each day the computer which controls the fixed speed safety camera system is rebooted. The reboot is initiated each day and each time the computer is rebooted an internal check is performed on all operations of each fixed speed safety camera system, including the clocks, sensors, camera and speed calculating hardware and software, in order to verify that all operations are functioning correctly. When the internal check detects a problem with one of the operations on a given fixed speed safety camera system, then that particular fixed speed safety camera system is inactivated and a request for service is relayed to ATS support personnel. This means that violations cannot be issued until any internal problem is fixed.

Speed validation tests are regularly performed on each installed and operable AutoPatrol 3D radar fixed speed safety camera system. The test is conducted by having a LIDAR Operator obtain true measurements of up to five vehicles per lane in the ascending and/or descending direction. The speed of the vehicle is captured by the LIDAR Operator and then relayed via cellular to an ATS Technician. The ATS Technician then compares the vehicle speed measured by the AutoPatrol 3D radar fixed speed safety camera system to the speed measured by the LIDAR Operator to ensure the accuracy of the AutoPatrol 3D radar fixed speed safety camera system. ATS maintains the results of each test in a Validation Report. The speed validation for each system was performed on the following date and the systems at each location were found to be in proper working order:

Location Code	Location Description	Date of Test
KRKF001	NB 132ND AVE NE @ MUIR ELEMENTARY/KAMIAKIN MIDDLE	2/22/2023
KRKF002	SB 132ND AVE NE @ MUIR ELEMENTARY/KAMIAKIN MIDDLE	2/10/2023
KRKF003	EB 80TH ST @ ROSE HILL ELEMENTARY	2/10/2023
KRKF004	WB 80TH ST @ ROSE HILL ELEMENTARY	2/10/2023
KRKF005	SB 724 STATE ST @ LAKEVIEW ELEMENTARY SCHOOL	2/23/2023
KRKF006	WB 10600 NE 68TH ST @ LAKEVIEW ELEMENTARY SCHOOL	2/10/2023
KRKF007	NB 12637 84TH AVE NE @ SANDBURG ES / FINN HILL MS / THOREAU ES	2/02/2023
KRKF008	SB 14006 84TH AVE NE @ SANDBURG ES / FINN HILL MS / THOREAU ES	2/01/2023

Preventative maintenance, including visual inspections, is regularly performed on the AutoPatrol 3D radar fixed speed safety camera systems. Preventative maintenance activities include: cleaning of the cameras and housing, general site inspection of environment and road conditions, inspection of poles, bases and enclosures, and inspection of system cables and connections. The location and date that preventative maintenance is performed is recorded in the Preventative Maintenance Log, which along with the Validation Report(s) referenced above, is attached hereto.

I am a custodian, or otherwise qualified witness, as to the attached records. I make this declaration based on personal knowledge, and if called and sworn as a witness, I could and would testify as set forth in the following paragraph.

Attached as Exhibits are: Exhibit A - Speed Validation Reports, Exhibit B - Preventative Maintenance Logs, and Exhibit C - Annual System Verification Certificate for all AutoPatrol 3D radar fixed speed safety camera systems installed and used by the City of Kirkland. All documents and materials included as Exhibit A, Exhibit B and Exhibit C are authentic and are what they purport to be, and accurately describe the matters

set forth therein. All such records are business records in that they are: (1) records kept in the ordinary course of business; (2) created at or near the time of the transactions or events reflected therein by, or based on information from, a person with knowledge of the transaction or events; and (3) kept as part of a regular business activity.

Based upon my education, training, experience, and knowledge of the AutoPatrol 3D radar fixed speed safety camera system, it is my opinion that the system is so designed and constructed as to accurately employ measurement techniques based on a division of distance over time in such a manner that it will give accurate measurements of the speed of motor vehicles.

I, Nathan Dumler, certify (or declare) under penalty of perjury under the laws of the State of Washington that the foregoing is true and correct.

Dated this 18th day of April. 2023 in Mesa, AZ

Nathan Dumler

Equipment:

Pro-Lite Plus Hand held Lidar Serial Number: LP05509
Certification Date: October 27th, 2022
Lidar Operator: Charles Goodrich
RLC Operator: Christopher Silva
RLC Operator: Nathan Keleher
RLC Operator: Nathan Dumler
RLC Operator: Kasie Desmarais
RLC Operator: LJ DiGristina
RLC Operator: Jared Thompson

A speed validation test was conducted for the sites listed above. The Lidar Operator, obtained true measurements of five vehicles per lane in the ascending and/or descending direction. Those speeds were obtained using a Kustom Signals Pro-Lite+ hand held Lidar instrument. The speed of the vehicle is captured by the Lidar Operator and then relayed via cellular to the RLC Technician. The RLC Technician is monitoring the vehicle speed at the Fixed Speed Camera system simultaneously to ensure the accuracy of the system. The speed validation tests performed on the above-listed dates confirmed the accuracy of the Fixed Speed Camera systems at each location.

I, Nathan Dumler, certify that the information contained in this report is true and accurate.

Test Results Summary Table

The frequency measurements performed by Compliance Testing, LLC and reported within this report demonstrate that the Jenoptik RRS24F-ST3 radar system has an accuracy of less than or equal to 0.62 mph in the range 6.21 mph to 62.14 mph and an accuracy of 0.62 mph to 1.86 mph in the range of 62.14 mph to 186.41 mph. This is equal to or better than +/- 1 mph accuracy up to 100 mph.

Test Frequency Set 1

Nominal Frequency (GHz)	Measured Frequency (GHz)	Amplitude (dBm)	Frequency Deviation (MHz)	Limit (MHz)	Results
F_0 = 24.0800	24.07880	8.9580	1.19 +/- 0.03	+/- 48.2	PASS
F_1 = 24.0872	24.08605	9.3370	1.20 +/- 0.03	+/- 48.2	PASS
F_2 = 24.0890	24.08780	10.425	1.19 +/- 0.03	+/- 48.2	PASS
F_3 = 24.0900	24.08875	10.812	1.24 +/- 0.03	+/- 48.2	PASS

Test Frequency Set 2

Nominal Frequency (GHz)	Measured Frequency (GHz)	Amplitude (dBm)	Frequency Deviation (MHz)	Limit (MHz)	Results
F_0 = 24.1200	24.11835	9.2290	1.65 +/- 0.03	+/- 48.2	PASS
F_1 = 24.1272	24.12555	9.6360	1.69 +/- 0.03	+/- 48.2	PASS
F_2 = 24.1290	24.12745	10.758	1.55 +/- 0.03	+/- 48.2	PASS
F_3 = 24.1300	24.12840	11.081	1.59 +/- 0.03	+/- 48.2	PASS

Test Frequency Set 3

Nominal Frequency (GHz)	Measured Frequency (GHz)	Amplitude (dBm)	Frequency Deviation (MHz)	Limit (MHz)	Results
F_0 = 24.1600	24.15870	7.9710	1.30 +/- 0.03	+/- 48.2	PASS
F_1 = 24.1672	24.16605	8.0150	1.20 +/- 0.03	+/- 48.2	PASS
F_2 = 24.1690	24.16780	9.2570	1.20 +/- 0.03	+/- 48.2	PASS
F_3 = 24.1700	24.16880	9.4320	1.20 +/- 0.03	+/- 48.2	PASS

Calibration Report

JENOPTIK

System: OK

Type:	24F_ST_3
Serial Number:	590-113/65047
Firmware Version:	G1J
Firmware Checksum:	0x788A
Configfile:	TR6000.xml
Versions:	E77, H43, JC6, H8M, H53
Date:	16.04.2020
Time:	11:11:42
Temperature:	24,4 °C
Humidity:	60 %

Test Measurements: OK

Simulated Speed [km/h]	Measured Speed [km/h]	Measured Angle [deg]	Measured Distance [m]
10,0	10,1	0,1	3,5
50,0	50,1	0,1	3,7
100,0	100,2	0,1	3,7
200,0	199,8	0,1	3,7
250,0	249,9	0,1	3,7
300,0	300,0	0,1	3,7

Frequency Test: OK

	required		measured	
f_0:	24,120	GHz	24,118	GHz
Δf_{01}:	7.250	kHz	7.234	kHz
Δf_{02}:	9.000	kHz	9.029	kHz
Δf_{03}:	10.000	kHz	10.028	kHz
Rel. Tx Pwr:	-35,00	dB	-33,45	dB

Beam Characteristics: OK

	required		measured	
RxTx Pwr:	-38,00	dB	-33,04	dB
Peak Pwr Angle:	0,00	deg	-0,75	deg
Beam Width:	20,00	deg	19,43	deg

Boardtest: OK

	required		measured	
Voltage (+3.3 V):	3,30	V	3,30	V
Voltage (+1.8 V):	1,80	V	1,80	V
Voltage (+1.2 V):	1,20	V	1,21	V
Voltage (+6.0 V):	6,00	V	6,09	V
Voltage (+5.0 V):	5,00	V	5,04	V
Voltage (-5.0 V):	-5,00	V	-4,95	V
Voltage (+4.1 V):	4,10	V	4,10	V
Voltage (-4.1 V):	-4,10	V	-4,09	V
Crystal Frequency:	0,00	Δppm	-47,15	Δppm
Temperature (Board):	25,0	°C	23,8	°C
Temperature (Acc.Sensor):	25,0	°C	25,7	°C
Temperature (Frontend):	25,0	°C	25,2	°C

Beam Characteristics:

PREVENTIVE MAINTENANCE CHECKLIST

Date & Time: 02/09/2023 08:48:00 **Site ID:** KRKF003 **Location:** 80th St @ Rose Hill Elementary

Product: AutoPatrol **Technician Name:** Charles Goodrich **See Associated Ticket:** ☐

Item	Status	Note/Action (If Status N/A, please specify)
1. Clean dirt, grime, and graffiti off enclosure and glass.		
1.1. Clean Graffiti. *Check physical integrity. Check paint/housing for graffiti and (or) other vandalism.*	*Pass*	
1.2. Clean Glass: *Clean and inspect all glass and enclosures.*	*Pass*	
1.3. Clean Enclosure (Interior): *Clear vents/fans of obstruction. Remove dust and dirt by vacuum/wiping.*	*Pass*	
1.4. Check Enclosure: *If enclosure moved during cleaning, tighten base.*	*Pass*	
2. Perform a general site inspection to include environmental and road conditions.		
2.1. PLP/Loop Loop: *Check for exposed or cut loop wiring, and epoxy wear and tear.*	*N/A*	
2.2. Power & Grounding: *Inspect all power and grounding connections.*	*Pass*	
2.3. Radar: *Inspect radar and cables. Visually inspect antenna.*	*Pass*	
2.4. WVDs: *Check for popped out pucks, visible cracks, or other noticeable damage.*	*N/A*	
3. Inspect poles, bases, and enclosures.		

3.1. Pole: *Check sturdiness. Check hurricane collar and confirm screws are tight.*	*Pass*	
3.2. Base: *Check for cracks. Ensure bolts (and latch bolt) are tight and secure inside base.*	*Pass*	
3.3. Enclosure: *Confirm straps are tight and secure against pole. Tighten if loose.*	*Pass*	
4. Inspect cables and connections.		
4.1. Cables: *Check all cables for visible wear or damage.*	*Pass*	
4.2. Connections: *Check for exposed wires on pole connecting to radar, camera enclosure, and strobe.*	*Pass*	

5. Take (and attach) photo of enclosure, pole, and photo enforcement sign(s) for presence and damage.

5.1. Enclosure:

5.2. Pole:

5.3. Photo Enforcement Sign(s):
