Site 4: Stormwater Treatment Vaults and Infiltration Wells Located on 124TH AVE NE and on State of WA Property

Description

This project would install four water quality treatment vaults and five stormwater infiltration wells to help slow the flow and clean polluted runoff before it reaches Juanita Creek.

This project would receive rainwater runoff from approximately 48 acres of upstream area.

This project is funded in part by a grant from the Washington State Department of Ecology

Site 4: Stormwater Treatment Vaults and Infiltration Wells

Located on 124TH AVE NE and on State of WA Property

Design Elements

- Install water quality treatment vaults to filter water before it flows to Juanita Creek.
- Install deep infiltration wells to help rainwater runoff soak into the ground.
- Construct new stormwater pipes and repair pavement.

Potential Benefits

- Improve water quality in Juanita Creek and provide flow control to reduce downstream flooding.
- New sport court surface or other amenities to be determined through collaborative process.

Potential Impacts

- All work will take place in/under public streets.
- Neighborhood access impacts during construction.
- Noise associated with construction activities.

What's Next?

No construction will take place for at least 2-5 years. With your input, the City will select the top three locations from the four potential locations above. Once the top three projects are selected, we will develop initial designs and will seek your input to refine each project. We would also need to secure funding before moving to construction.

For more information, and to provide input in future phases, contact Jenny Gaus at (425) 587-3850 or at jgaus@kirklandwa.gov.
